

LSMV

**Enclosed asynchronous three-phase motors
for speed variation**

Aluminium alloy housing - 0.18 to 132 kW

Technical catalogue

LSMV: THE VARIABLE SPEED SOLUTION FOR ALL APPLICATIONS

Placed at the heart of the processes, asynchronous motors are increasingly being controlled by variable speed drives. The main reasons are to save energy, to provide adaptability to fulfil needs of diverse applications and to enhance performance of machines to which they are coupled.

These operating requirements demand high performance motors which can guarantee sufficient torque over the entire speed range without experiencing deficiency in thermal and dielectric capacities.

Leroy-Somer has integrated these requirements into the basic design of LSMV range with performance level unique to meet the most arduous of applications.

■ CONSTANT TORQUE from 5 to 50 Hz

The variable speed motor solution with no derating or forced ventilation:

■ INTERCHANGEABILITY GUARANTEED

Mechanically identical to an IEC fixed speed motor with the same power

■ SIMPLICITY

Operates without forced ventilation so no additional supply needed.

LSMV Range

- Asynchronous three-phase aluminium housing motors
- Power: 0.18 to 132 kW
- Torque: 0.8 to 880 N.m
- Speed: 0 to 6000 min⁻¹
- Can be used with different control methods: scalar V/F, vector open or closed loop

LSMV: THE VARIABLE SPEED SOLUTION FOR ALL APPLICATIONS

In order to meet the requirements for combined operation with variable speed drives, the LSMV motor design incorporates a whole host of options, from the most simple to the most complicated:

■ Thermal monitoring for total motor protection

- positive temperature coefficient thermistors (PTC)
- thermostat normally open PTO or normally closed PTF
- thermocouples, thermal sensors PT100, KTY

■ Speed feedback by single turn of incremental encoder

- resolution of 256 ppts to 4096 pulses (other resolutions on request)
- electrical supply: 5 Vdc or 11/30 Vdc
- output 5 Vdc TTL compatible with RS422 or HTL 11-30 Vdc push pull

■ Speed feedback by single turn or multi-turn of absolute encoder

- resolution 4096 to 8192 ppts
- electrical supply 5 Vdc or 11-30 Vdc
- interface SSI, Biss, EnDat®, Hiperface® or bus

■ Hold on position or braking at end of cycle

- fail safe brakes
- braking torque from 8 to 80 N.m
- supply voltage 230 or 400 V / 1ph (195 VDC coil)

Enclosed three-phase asynchronous motors for speed variation LSMV

LSMV: THE VARIABLE SPEED SOLUTION FOR ALL APPLICATIONS

The constructional features that guarantee security for all applications:

- **IEC shaft and fixing dimensions**
- **Higher balancing Class, level A or B** for increased lifespan of bearings as well as reduced vibrations and noise
- **Aluminium alloy frame** for superior thermal dissipation and power-to-weight ratio
- **Cast iron end-shields at both ends** for stronger housings and better fit for bearings
- **Specific control of rotor and stator tolerances** for better utilisation of air-gap flux over the whole speed range
- **Guaranteed torque and thermal performance on inverter supply**
- **Enhanced winding insulation system reducing risk of breakdown** for peak voltage > 1500 V, but < 2500 V, higher insulation system available
- **PTC thermistors as standard for thermal protection**

* speed given without slip

The torques given in this table are measured under the following conditions:

- class B temperature rise at all points
- control rule U/F constant

The rated torque can be maintained over a speed range from 5 to 50 Hz with F or B temperature rise depending on the drive frequency and control mode (open or closed loop vector control).

* speed given without slip

The torques given in the table are measured under the following conditions:

- class B temperature rise at all points
- control rule U/F constant

The rated torque can be maintained over a speed range from 5 to 50 Hz with F or B temperature rise depending on the drive frequency and control mode (open or closed loop vector control).

For any applications not listed above, the motors can be directly connected in delta 230 V 50 Hz and taken to 400 V 87 Hz.

But, for the following cases, a star connection is recommended:

- * regenerative operations: presses, cranes...
- * short cycle operations with short acceleration and deceleration times (> 60 cycles/h)
- * highly unbalanced applications.
- * relative humidity > 90 %.

For any applications not listed above, the motors can be directly connected in delta 230 V 50 Hz and taken to 400 V 87 Hz.

But, for the following cases, a star connection is recommended:

- * regenerative operations: presses, crane...
- * short cycle operations with short acceleration and deceleration times (> 60 cycles/h)
- * highly unbalanced applications.
- * relative humidity > 90 %.

Asynchronous LSMV motor for speed variation Optional equipment

B1 - Speed feedback option

B1.2 - ENCODER OPTION

B1.2.1 - Incremental encoder

This pulse generator delivers a number of pulses proportional to the speed of the motor. It has a hollow connecting shaft, with a 2 track output + Top 0 + supplements. It can be supplied with a 5 V +/- 10% voltage or a regulated 11-30V.

For connections greater than 20 m, the cables should have twisted pairs. The maximum length of the cables (screened) shall not exceed 150 m on the optocoupler input.

B1.2.2 - Absolute mono-turn encoder

The absolute mono-turn encoder converts a drive shaft rotation into a succession of "electrical coded steps". The number of steps per rotation, is determined by an optical disc. One shaft rotation generally has 8192 steps, which corresponds to 13 bytes. At the end of a complete encoder shaft rotation, the same values are repeated.

B1.2.3 - Absolute multi-turn encoder

The absolute multi-turn encoder saves the position on one rotation as well as for several rotations, with a maximum of 4096 turns.

SCREENED CABLE	White	Brown	Green	Yellow	Grey	Pink	Blue	Red		Braided	Braided	Braided

Encoder connection

Using incremental encoders, in industrial environments comprising high current installations or submissions from electronic inverters, requires classic fundamental and well known rules to be observed.

Basic rules:

1 - Use screened cables, For connections exceeding 20 metres, use cables with several screened twisted pairs, reinforced with a general external screening. Conductors of the same part should be reserved to a track and a complementary track: example A and \bar{A} , B and \bar{B} etc.

It is recommended to have standardised 0,14 mm² minimum section conductors (cable type recommended: LIYCY 0,14 mm²).

2 - Maintain a maximum distance between the encoder connection cables and the power cables and avoid a parallel course.

B1.3 - Bearing sensor option:

In order to make motorization as compact as possible, while proposing a precise speed measurement, the bearing sensor solution constitutes an interesting alternative.

Mounted in place of the rear bearing, conserving all of its performance, the bearing sensor integrates a system capable of delivering up to 1024 pulses per rotation on 2 tracks as well as an additional signal "Top Turn"

3 - Distribute and connect the 0V and the screening in "star".

4 - Earth the screening with cables of 4 mm² section minimum.

5 - Never connect screening to earth, at its two extremities. In preference, earth a screened cable on the "use" side of the encoder signal (cubicle, automation, counter). For the armature, the screening must be joined at one point, itself connected to the general earth conforming to security standards. As for the encoder, each screening must be perfectly insulated, in relation to any other screening, to earth or any kind of potential.

Check the continuity of the screening while using the connectors or connection boxes.

The actual range covers motor sizes from LSMV 80 up to LSMV 160LR and exists for 5 V with TTL output signals or 15 V for HTL signals.

The number of pulses varies according to the types but the most used are the 16, 32, 64 and 128 points per turn even if the resolutions up to 1024 points are available on request.

Precautions when connecting:

1 - Never connect or disconnect on the encoder or cubicle side, without turning the power off.

2 - For the supply, use stabilised, regulated and filtered supplies. The use of supplies using transformers delivering efficient 5 V (or 24 V) at their secondary, followed by filter chokes and condensers is prohibited, because, in reality, in the direct voltages thereby obtained are:

- for the 5 V : $5 \cdot \sqrt{2} = 7,07$ V
- for the 24 V : $24 \cdot \sqrt{2} = 33,936$ V

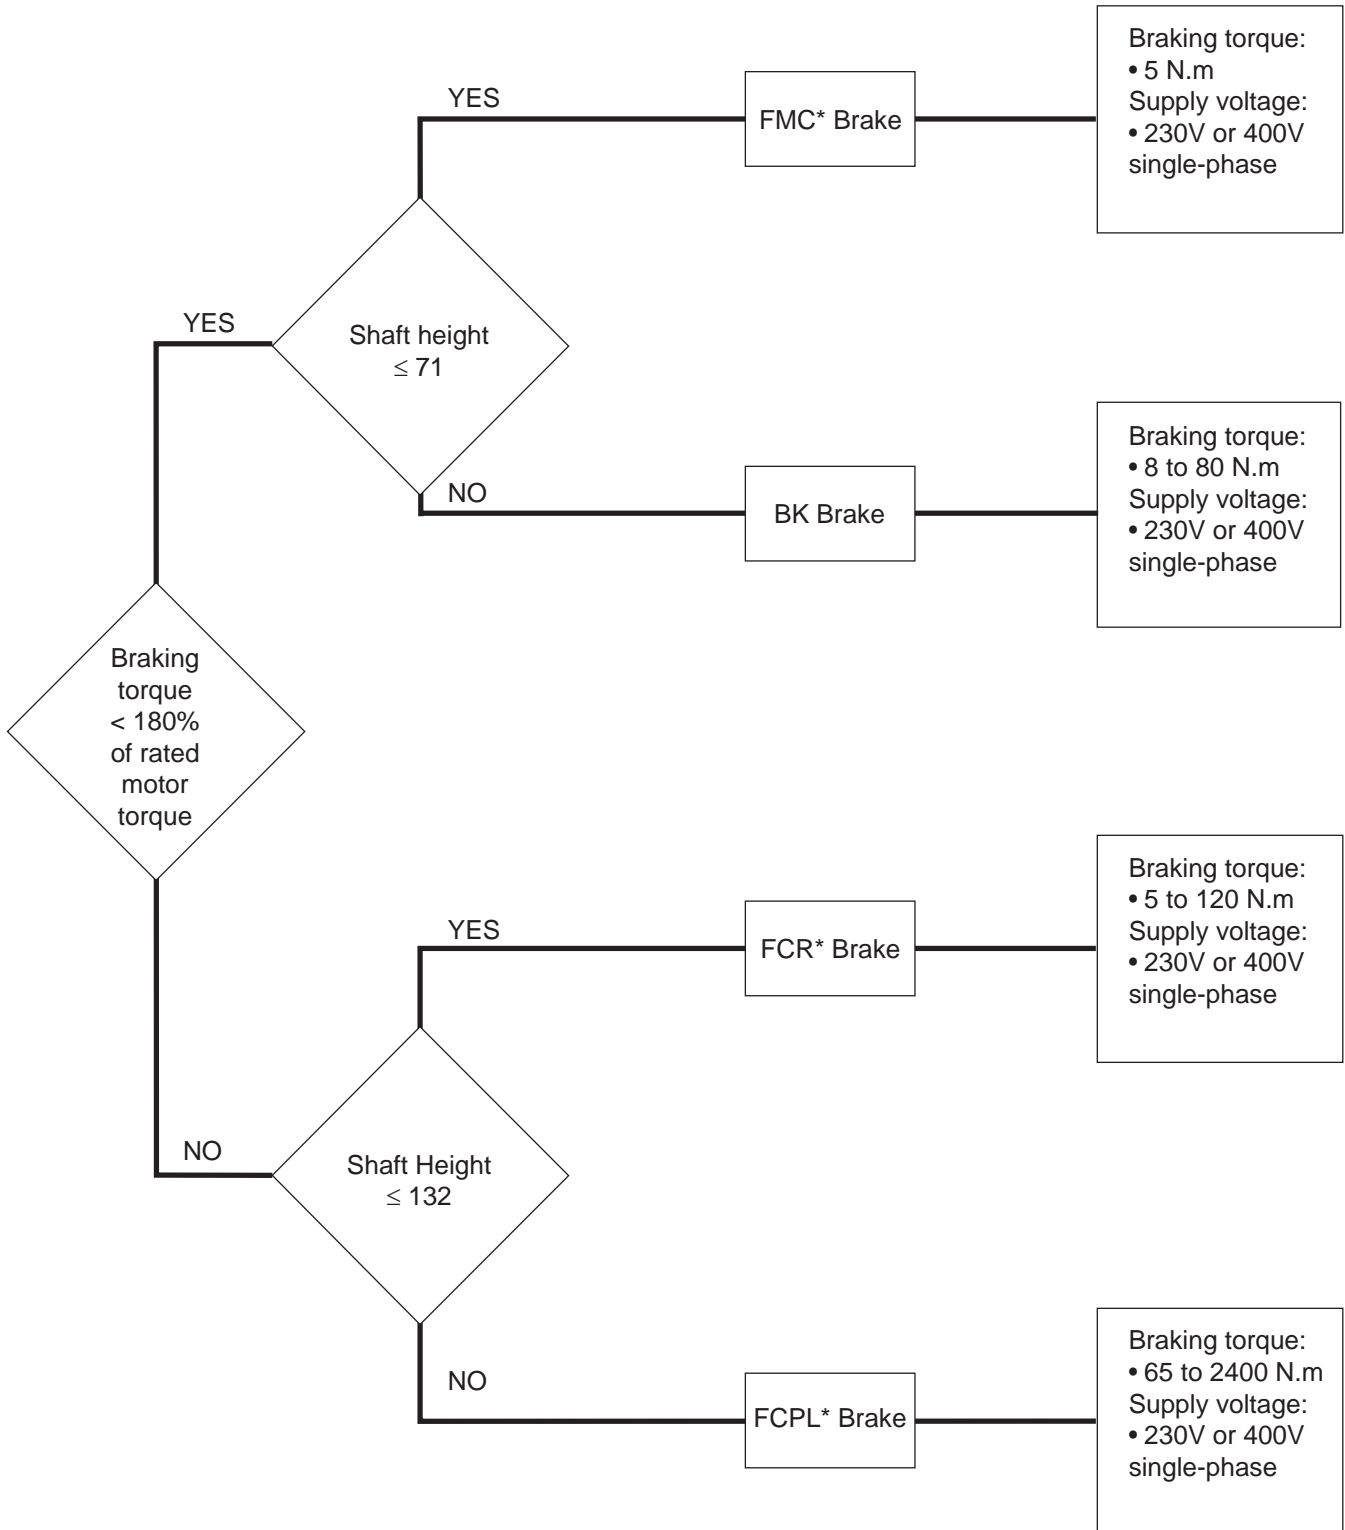

3 - Respect the international standards in force.

Asynchronous LSMV motor for speed variation Optional equipment

B2 - Brake option

B2.1 - BRAKE SELECTION

* FCR Brake: see asynchronous motor catalogue FCR brakes ref. 3305.
 FCPL Brake: see asynchronous motor catalogue FCPL brakes ref. 3463.
 FMC Brake: see motor brake catalogue.

Asynchronous LSMV motors for speed variation Optional equipment

B2 - Brake option

B2.2 - BK BRAKE

The BK Brake, current, loss brake, a single disc (1) with 2 friction faces, is used as a retarder brake and/or an emergency brake.

B2.2.1 - Operating principle:

A friction produced by several springs (2) generates a braking torque which allows different loads. The transmission of brake torque from the hub (4) to rotor (3) is effected through splines. The friction pads ensure a high braking torque with minimal wear. This component does not need maintenance or adjustment.

The release of the brake is achieved with an electromagnetic field produced by the coil (5) with voltage at its terminals. The brakes are delivered ready to use (airgap preadjusted) with the drive unit mounted in the terminal box. The "manual release" option is available on request.

B 2.2.2 - Supply under 230 V:

Unit type: S08

Rectified voltage: 210V full wave

Nominal voltage (wind brake): 185V

B2.2.3 - Supply under 400 V :

Unit type: S08

Rectified voltage: 210V single wave

Nominal voltage (wind brake): 185V

Terminal voltage (brake):

1) $U_{dc} = 0,45 \times U_{ac}$ (400V)

2) $U_{dc} = 0,9 \times U_{ac}$ (230V)

B2.2.4 - Characteristics:

Type	Power at 20 °C W	Resistance Ohm	Absorbed voltage mA	Braking torque			Max speed min ⁻¹
				100 min ⁻¹ N.m	1500 min ⁻¹ N.m	3000 min ⁻¹ N.m	
BK 08	25	1444	131,5	8	6,8	6,24	10100
BK 10	30	1203	157,8	16	9,96	9,12	8300
BK 12	40	902,5	210,5	32	25,92	23,68	6700
BK 14	50	722	263,1	60	48	43,8	6000
BK 16	60	601,7	315,7	80	63,2	57,6	5300

B2.2.5 - Operating time :

t_1 Engagement time
 t_2 Cut-off time (until $M = 0,1 M_k$)
 t_{11} Response delayed upon engagement
 t_{12} Torque incremental time

Type	Braking torque at 100 min ⁻¹ N.m	Friction max. J	Frequency of operations	Operating time			
				t_{11} ms	t_{12} ms	t_1 ms	t_2 ms
BK 08	8	7500	50	13	19	32	60
BK 10	16	12000	40	28	19	47	73
BK 12	32	24000	30	29	28	57	111
BK 14	60	30000	28	15	23	38	213
BK 16	80	36000	27	23	30	53	221

The passage of a brake torque to a permanent torque is effected by a certain delay. The release times correspond to switching direct current inducing a voltage approximately 5 to 10 times greater than the nominal voltage. The diagram on the side shows the delay in release time t_{11} , the increase in tor-

que time t_{12} , the engagement time $t_1 = t_{11} + t_{12}$ and the time t_2 .

The cut-off time is not modified by switching direct or alternative current side. It can be reduced by the application of rapid excitation or over-excitation cards.

B2.2.6 - Braking time / Max allowed inertia:

Type	Inertia at 1000 min ⁻¹ kg.m ²	Braking time ms	Inertia at 1500 min ⁻¹ kg.m ²	Braking time ms	Inertia at 3000 min ⁻¹ kg.m ²	Braking time ms

Asynchronous LSMV motor for speed variation Optional equipment

B3 - Forced ventilation option

The forced ventilation option enables:

- Continuous operation at zero speed with a torque equal to the motor's nominal torque at 50 Hz.
- Operation at overspeed:
where $n > 2600 \text{ min}^{-1}$ at 4 and 6p
where $n > 4500 \text{ min}^{-1}$ at 2p

It is also imperative in the following cases:

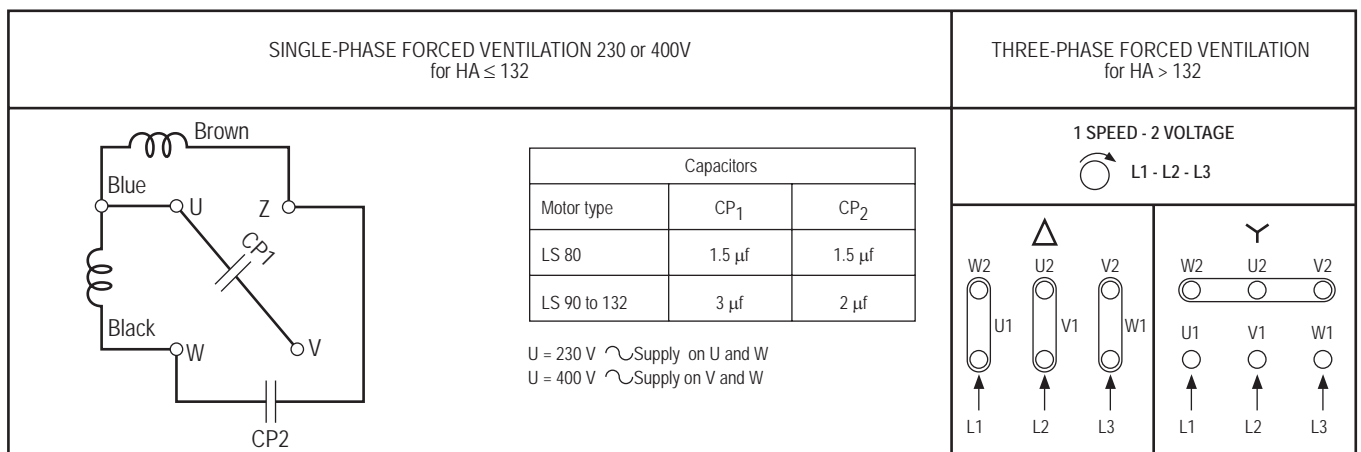

- When used with encoders without a through shaft (see, B.1.2.4).
- LSMV motor 6p for constant torque applications at $n < 25\text{Hz}$

HA	Supply voltage ¹	Consumption		Protection index ²

Asynchronous LSMV motors for speed variation Optional equipment

B4 - Reinforced insulation

The standard motors within the **LSMV** range are compatible with the supply characteristics as follows:

$U = 480V$ max.

- Value of the voltage peak withstand capability at the motor terminal: $1500V$ at $dv/dt = 5kV/\mu s$.

- Switching frequency: $2,5$ kHz min.

However they can be supplied for more severe conditions with additional protection.

B4.1 - REINFORCED INSULATION OF THE WINDING

The main effect associated with supplying power via an electronic drive is overheating of the motor due to the non-sinusoidal shape of the signal. In addition, this can also cause the winding to age more quickly because of the voltage peaks generated at each pulse in the power supply signal (see fig 1).

B4.2 - REINFORCED INSULATION OF THE MECHANICAL PARTS

The same inverter supply that has damaging effect on the winding of a motor, can impact the mechanical parts as well by additionally injecting circulating currents that already exist in the network supplied motors.

This can lead to premature wear of the bearings. In all asynchronous motors there exists a shaft voltage in relation to earth. This voltage which is predominantly due to asymmetry in the air-gap, excites a current, which circulates in the rotor and finds a path through the endshields into the bearings. This current can produce, via the oil film, electrical discharges between the ball and race reducing the life-span of the bearing.

In the case of a PWM inverter supply, the current values are increased and accentuates the phenomena.

A second phenomena can also occur: high frequency currents generated by the semiconductor (Insulated Gate Bipolar Transistors - IGBT) bridge at the output of the inverter.

These currents "seek" to find a return path towards the inverter and pass through stator frame and earth if the contact between these parts is correctly made.

Otherwise, the currents will take a path of least resistance i.e end-shields, bearings, shaft and driven machine coupled to the motor. In this case, the protection of the bearings must be considered.

An "insulated bearing" option is available through the **LSMV** range from frame size 160 and above. The bearing is normally fitted on the non-drive end side.

Characteristics of insulated bearings:

The external bearing rings are coated with an electrical insulated ceramic. The dimensions as well as the tolerances of these bearings are identical to the standards used and therefore can be mounted in their place without modification to the motors. The maximum voltage is $500V$.

B5 - Cable gland

In certain applications, it is necessary to ensure a continuity of ground between the cable and the weight of the motor in order to insure a protection of the installation conforming to CEM 89/336/CEE.

A cable gland option with anchoring on the armed cable is available throughout the LSMV range (Std on LSMV 71).

Asynchronous LSMV motor for speed variation Optional equipment

B6 - Thermal protection

The LSMV motors are CTP equipped by standard

Motor protection is assured by a thermomagnetic circuit breaker, manually or automatically operated, placed between the selector and the motor. This circuit breaker can be supplemented with fuses.

This protection equipment insures global protection of the motors against low variation

over-loads. If a reduction in the reaction time is required, if detection of an instantaneous over-load is wanted, or to follow the evolution of the temperature at the "hot points" of the motor or at characteristic points for maintenance of the installation, it is recommended to install heat protection sensors

positioned at sensitive points. Their type and description are described in the chart below. **It is underlined that under no circumstances these sensors are to be used to directly control the motor's duty cycle.**

Indirect incorporated thermal protection

Type	Operating principal	Operating curve	Cut-off power (A)	Assured protection	Number of apparatus fitted*
Thermal protection normally closed PTO	Bi-metallic with indirect heating and contact to open (O) 		2.5 A under 250 V to $\cos \phi 0.4$	global monitoring slow over-loads	Mounting in a control circuit 2 or 3 in series
Thermal protection normally closed PTF	Bi-metallic with indirect heating and contact to close (F) 		2.5 A under 250 V to $\cos \phi 0.4$	global monitoring slow over-loads	Mounting in a control circuit 2 or 3 in parallel
Thermistor with a positive temperature co-efficient CTP	Variable non-linear resistance by indirect heating 		0	global monitorings fast over-loads	Mounting with associated relay in control circuit 3 in series
Thermal sensor KT Y	Resistance depends on the winding temperature 		0	continuous high precision monitoring of key hot points	Mounting in control board with associated reading apparatus (or recorder) 1/point to be monitored
Thermocouples T ($T < 150\text{ }^{\circ}\text{C}$) Copper Constantan K ($T < 1000\text{ }^{\circ}\text{C}$) Copper Copper-Nic-	Peltier effect		0	continuous monitoring of specific hot points	Mounting in control board with associated reading apparatus (or recorder) 1/point to be monitored
Thermal sensor with platinum PT 100	Variable linear resistance by indirect heating		0	continuous high precision monitoring of key hot points	Mounting in control board with associated reading apparatus (or recorder) 1/point to be monitored

- TNF: nominal operating temperature

- The TNF are chosen according to the implantation of the sensor in the motor and the temperature rise class.

* The number of apparatus concerns the protection of the winding.

Mounting of the different protections

- PTO or PTF, in the control circuit.
- CTP, with associated relay, in the control circuits.
- PT 100 or thermocouples, with associated reading apparatus (or recorder), in the installation control board for continuous monitoring.

Alarm and pre-alarm

All protection equipment may be doubled (with different TNF): the first equipment serves as a pre-alarm (light or sound signals, without power circuit cut-off), the second used as an alarm (assuring the cut-off of power supply).

Asynchronous LSMV motors for speed variation Optional equipment

B7 - Varmeca option

The Varmeca is a frequency inverter with flux vector control operating on all of the supply networks (200 V to 480 V 50/60 Hz). Mechanically it is mounted in place of the terminal box.

The assembly enables operation at constant torque, at low speed and at constant power at high speed (forced ventilation option obli-

gatory). In all cases the Varmeca enables the management of the CTP and PTO motor sensors.

The motor-inverter offers a decentralised solution on the machine, the product being designed to operate in an industrial environment (electronics encapsulated in resin).

A number of options may be integrated:

local speed control, forward and reverse drive, display, braking resistance; field bus. Varmeca conforms to the European standards CE mark as well as North America, UL for the USA and c(UL)us for Canada.

B8 - Connectable plug option

The connectable plug option allows a simple, fast and secured motor connection.

It can be used in a number of processes (automobile, food industries...) where machinery replacement time must be minimised.

The male part of the connector is mounted in place of or on the motor terminal box, depending on the other selected options.

The connector plug is connected to the stator coil.

The female part of the connector is attached to the supply network.

Up to 10 contacts can be mounted on the connectors, covering powers up to 11 kW to the acceptable maximum current limit of 40 A. For higher powers please consult.

Asynchronous LSMV motors for speed variation Dimensions

D7 - Overall dimensions of options

D7.1 - LSMV MOTORS WITH OPTIONS

The integration of LSMV motors within a process, sometimes needs accessories that will facilitate operating:

- forced ventilation for motors operating at low or high speed

- parking brakes to hold the motor in the stop position without having to maintain power on the motor
- emergency stop brakes to immobilize a load in case of a failure in the control of the motor torque or a rupture in the supply network.
- an encoder which gives digital information

enabling a more precise control of speed and positioning.

All of these options can be combined as indicated in the table below.

*These options are self ventilated.

Asynchronous LSMV motors for speed variation Construction

E1 - Definition of the protection indices (IP/IK)

The LSMV motors are in standard IP 55/IK 08 configuration

Protection indices for electrical material

According to IEC 60034-5 - EN 60034-5 (IP) - EN 50102 (IK) standards

1st number: protection against solid bodies			2nd number: protection against liquid			3rd number: mechanical protection		
IP	Tests	Definition	IP	Tests	Definition	IK	Tests	Definition
0		No protection	0		No protection	00		No protection
1	$\varnothing 50 \text{ mm}$	Protected against solid bodies superior to 50 mm (example: involuntary hand contacts)	1		Protected against vertical water drops (condensation)	01		Impact energy: 0,15 J
2	$\varnothing 12 \text{ mm}$	Protected against solid bodies superior to 12 mm (example: fingers)	2		Protected against vertical water drops within a range of 15°	02		Impact energy: 0,20 J
3	$\varnothing 2.5 \text{ mm}$	Protected against solid bodies superior to 2,5 mm (examples: tools, wire)	3		Protected against vertical water drops within a range of 60°	03		Impact energy: 0,37 J
4	$\varnothing 1 \text{ mm}$	Protected against solid bodies superior to 1 mm (examples: thin tools, small wire)	4		Protected against water drops from all directions	04		Impact energy: 0,50 J
5		Protected against dust (no harmful deposit)	5		Protected against water jets from all directions	05		Impact energy: 0,70 J
6		Protected against any dust penetration.	6		Protected against water projections comparable to green sea	06		Impact energy: 1 J
			7		Protected against submersion effects from 0,15 to 1 m	07		Impact energy: 2 J
			8		Protected against extended submersion effects under pressure	08		Impact energy: 5 J
						09		Impact energy: 10 J
						10		Impact energy: 20 J

Example:

IP 55 Machine case

IP : Protection index.

5 : Machine protected against dust and accidental contacts.

Test criteria: no ingress of harmful amounts of dust, no direct contact with rotating parts. Duration of test 2 hours (test criteria: no ingress of talc harmful to the good operation of the machine).

5 : Machine protected against water projections in all directions from a water jet with a flow of 12,5 l/min under 0,3 bars at a distance of 3 m from the machine.

Duration of test 3 minutes (test criteria: no harmful ingress of water projected onto the machine).

Asynchronous LSMV motors for speed variation Construction

E2 - Component parts

LSMV Motor description

Designations	Materials	Remarks
1 Finned housing	Aluminium alloy	<ul style="list-style-type: none"> - with cast or bolt on feet, or without feet - pressure die cast for shaft height ≤ 180 - gravity die cast for shaft height ≥ 200 <ul style="list-style-type: none"> • 4 or 6 mounting holes for foot housing • motor lifting rings for shaft height ≥ 160, option in 132 and 112 - earth terminal in housing optional
2 Stator	Insulated low carbon magnetic steel laminations Electrolytic copper	<ul style="list-style-type: none"> - the low carbon content guarantees long term stability of the characteristics - sheet steel lamination assembly - optimised magnetic circuit. - impregnation allowing resistance to violent voltage variations generated by high switching frequencies of the IGBT transistor drives in accordance to IEC 34-17 standard - class F insulation system - thermal protection assured by PTC probes (1 per phase, 2-wire output)
3 Rotor	Insulated low carbon magnetic steel laminations Aluminium (A5L)	<ul style="list-style-type: none"> - Inclined slots - squirrel cage pressure die cast in aluminium (or alloy for special applications) - mounted on the shaft by shrink fitting and keyed for lifting applications - dynamically balanced rotor level A or B
4 Shaft	Steel	
5 End shields	Aluminium Cast iron	<ul style="list-style-type: none"> - shaft height 71 (cast iron end shield) - shaft height 80 to 315
6 Bearings and greasing		<ul style="list-style-type: none"> - ball bearings C3 type - pre-loaded rear bearings - protected types greased for life up to and including 180 height - semi-protected or open from 200 shaft height - open types re-greasable from 225 shaft height
7 Labyrinth seal Lip seals	Technopolymer or steel Synthetic rubber	<ul style="list-style-type: none"> - front lipseals or deflector for all flange motors - lipseals, deflector or labyrinth seals for foot mounted motors
8 Fan	Composite material	- 2 directions of rotation: straight blades
9 Fan cover	Steel sheet	- equipped on request with a rain drip cover for vertical operation, shaft end facing downwards.
10 Terminal box	Aluminium alloy	<ul style="list-style-type: none"> - equipped with an 8 steel stud terminal block (brass option) - terminal box delivered fitted with a cable gland - 1 earth terminal in all terminal boxes

Asynchronous LSMV motors for speed variation Construction

E3 - External finish

*LSMV motors conform
to the System Ia prescription*

LEROY-SOMER motors are protected with a range of surface finishes.
The surfaces receive appropriate special treatments, as listed below.

Surface preparation

SURFACE	PARTS	TREATMENT
Cast iron	End Shields	Shot blasting + Primer
Steel	Accessories	Phosphatization + Primer
	Fan Covers	Electrostatic or Epoxy powder
Aluminium alloy	Housing - Terminal boxes	Shot blasting

Definition of atmospheres

An atmosphere is considered as corrosive when components are attacked by oxygen.
It is said to be aggressive when components are attacked by bases of acids or salts.

Painting systems

PRODUCTS	ATMOSPHERE	SYSTEM	APPLICATIONS	RESISTANCE TO SALINE MIST ISO 9227 standard
LEROY-SOMER Motors	Little or non aggressive (indoors, rural, industrial)	Ia	1 coat polyurethane finish 20/30 µm	72 hours
	Moderately corrosive: humid, and outside (temperate climate)	IIa	1 base coat Epoxy 30/40 µm 1 coat polyurethane finish 20/30 µm	150 hours
	Corrosive: coastal, very humid (tropical climate)	IIIa	1 base coat Epoxy 30/40 µm 1 intermediate coat Epoxy 30/40 µm 1 coat polyurethane finish 20/30 µm	300 hours
	Significant level of chemical attack: frequent contact with bases, acids, alkalines environment - neutral atmosphere (not on contact with chlorinated or sulphurous products)	IIIb	1 base coat Epoxy 30/40 µm 1 intermediate coat Epoxy 30/40 µm 1 coat finish Epoxy 25/35 µm	500 hours

The Ia system is for moderate climates and the IIa system is for general climates as defined by the IEC 60721-2-1 standard.
Exposure to saline mist under the terms of the ISO 9227 standard.

Asynchronous LSMV motors for speed variation Construction

E5 - Bearings and greasing

E5.1 - GREASED FOR LIFE BEARINGS

For motors with shaft heights from 71 to 132, the type and size of the bearings enable long life-time and therefore greasing for life for the machines.

E5.2 - BEARINGS WITH GREASE NIPPLES

Motors 160 and 180 with greased for life bearings and motor shaft height 200 with factory greased bearings using a lithium soap complex that has an operating range of -20°C and + 150°C, are not fitted with grease nipples.

Under normal operating conditions, the lubricant life span (L10h) in hours is indicated in the chart for machines with horizontal shafts operating at 50 Hz and 60 Hz and in temperatures less than or equal to 25°C.

Speed \ Shaft height	3 600	3 000	1 800	1 500
160	≥ 40 000	≥ 40 000	≥ 40 000	≥ 40 000
180	≥ 40 000	≥ 40 000	≥ 40 000	≥ 40 000
200	16 000	24 000	32 000	≥ 40 000

Note: On request, motors with shaft heights 90 to 200 can be fitted with grease nipples, and 225 and 250 shaft height motors can be supplied without grease nipples.

E5.3 - BEARINGS WITH GREASE NIPPLES

For a standard bearing assembly in a motor shaft height ≥ 160 fitted with grease nipples, the chart on the right, depending on the type of motor, shows the re-greasing intervals to be used at 25°C for horizontal shaft machines.

The chart opposite is valid for LSMV motors lubricated with ESSO UNIREX N3 grease, which is used as standard.

E5.4 - SPECIAL CONSTRUCTION AND AMBIENTS

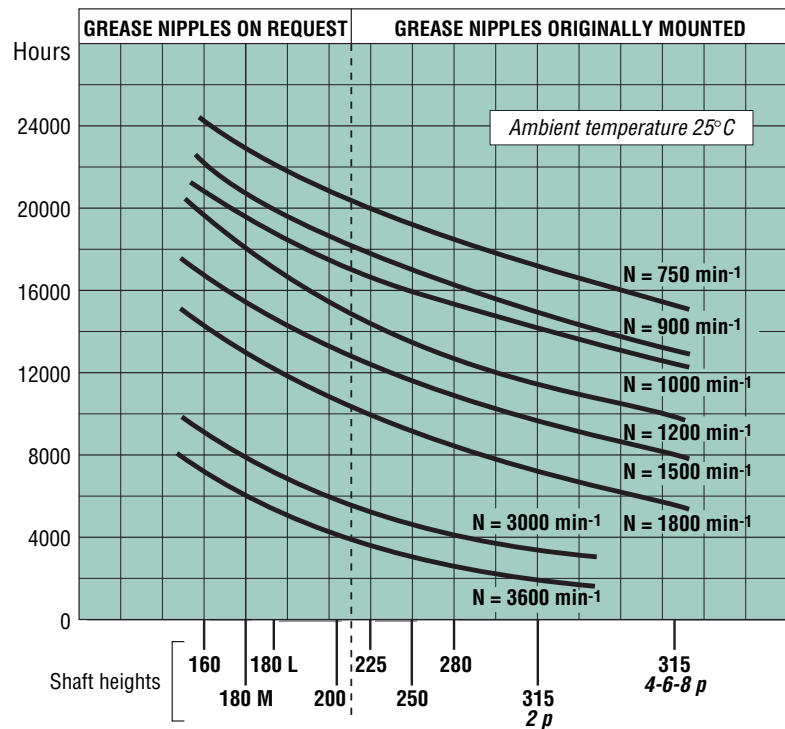

For vertical shaft machines operating at 25°C, the re-greasing intervals will be approximately 80% of those shown on the chart.

Motors operating at 40°C need more frequent lubrication, the re-greasing intervals will be approximately 50% of those shown on the chart.

Note: the quality and quantity of grease and the re-greasing intervals are shown on the machine's identification plate.

For special assemblies (motors fitted with front roller bearings or other assemblies), machinery with a ≥ 160 shaft height have bearings with grease nipples. Bearing maintenance instructions are given on the identification plates.

Re-greasing intervals according to shaft height and speed of rotation (for standard bearing assemblies).

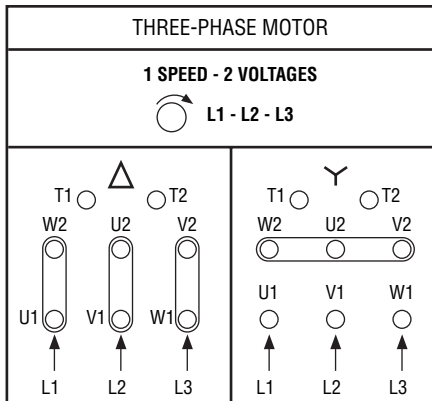

Asynchronous LSMV motors for speed variation Construction

E6 - Connection

E6.1 - TERMINAL BOX

Positioned as standard on the top and front of the motor, IP 55 protected, equipped with cable glands according to the chart below.

The standard position of the cable gland is on the right, as viewed from the end of the motor shaft.

Terminals T1 - T2: Thermal protector connection

Positions of the terminal box relative to the motor shaft end

Positions of the cable gland relative to the motor shaft end

Only positions 1 and 3 are possible

Terminal box position	A	B	D
71 to 132	●	○	○
160 to 315	●	○	○

● : standard

○ : option at extra cost

Cable gland position	1	2	3	4
Foot mounted motor				
71 to 315	●	&	●	&
Flange mounted motor FT				
71 to 315	●	&	●	&
Flange mounted motor FF				
71 to 315	●	&	●	&

● : standard

● : obtainable by simply changing the position of the terminal box or the cable gland

& : not possible in encoder version

E6.2 - THE TERMINAL BLOCKS DIRECTION OF ROTATION

Standard motors are equipped with an 8 terminal block (6 power terminals + 2 terminals for thermal protection).

When the motor is supplied with U1, V1, W1 or 1U, 1V, 1W through a L1, L2, L3 direct supply, it rotates clockwise when viewed from the shaft end.

If the supply is switched on 2 phases, the direction of rotation will be reversed, (it is necessary to check that the motor and machinery can rotate in both directions).

Tightening torque on the terminal block nuts

Terminal	M 4	M 5	M 6	M 8	M 10	M 12	M 16
Torque N. m	2	3.2	5	10	20	35	65

Motor type	230/400 V

Asynchronous LSMV motors for speed variation Construction

E7 - Machine vibration level

E7.1 - LEVEL OF MACHINE VIBRATION - BALANCING

Disymmetries due to construction (magnetic, mechanical and airflow) lead to sinusoidal (or pseudo sinusoidal) vibrations over a wide range of frequencies. Other sources of vibration can also affect motor operation: such as poor mounting, incorrect drive coupling, end shield misalignment, etc.

We shall first of all look at the vibrations emitted at the operating frequency, corresponding to an unbalanced load whose amplitude swamps all other frequencies and on which the dynamic balancing of the mass in rotation has a decisive effect.

Under the ISO 8821 standard, rotating machines can be balanced with or without a key or half-key on the shaft extension. The ISO 8821 standard requires the balancing method to be indicated on the shaft extension as follows:

- half-key balancing: letter H
- full key balancing: letter F
- balancing with key: letter N.

Measured size

The vibration speed can be chosen as the variable to be measured. This is the speed at which the machinery revolves around its rest position. It is measured in mm/s.

As the vibratory movements are complex and non-harmonic, it is the quadratic average (rms value) of the vibration speed which is used to express the vibration level.

Other variables that can also be measured are the vibratory displacement amplitude (in μm) or vibratory acceleration (in m/s^2).

If the vibratory displacement is measured against frequency, the measured value decreases with the frequency: High frequency vibrations are not taken into account.

If the vibratory acceleration is measured, the measured value increases with the frequency: low-frequency vibrations (unbalanced loads) cannot be measured.

LSMV machines have:
- level B for ranges $\leq 132 \text{ mm}$
- level A for ranges $\geq 160 \text{ mm}^*$

* Ranges 160 LR, 160MP and MR are balancing level B

Asynchronous LSMV motors for speed variation Construction

E7 - Machine vibration level

E7.2 - MAXIMUM VIBRATION MAGNITUDE LIMITS, FOR DISPLACEMENT, SPEED AND ACCELERATION IN RMS VALUES FOR FRAME SIZE H (IEC 60034-14)

Vibration level	Frame size H (mm)								
	56 < H ≤ 132			132 < H ≤ 280			H > 280		
	Displacement μm	Speed mm/s	Acceleration m/s ²	Displacement μm	Speed mm/s	Acceleration m/s ²	Displacement μm	Speed mm/s	Acceleration m/s ²
A	25	1.6	2.5	35	2.2	3.5	45	2.8	4.4
B	11	0.7	1.1	18	1.1	1.7	29	1.8	2.8

For large machines and those requiring special levels of vibration, balancing in situ (after assembly) can be accomplished.

In this case, an agreement must be established because the dimensions of the machine may be modified by the necessary addition of balancing discs mounted on the shaft ends.

E7.3 - MECHANICAL SPEED LIMITS FOR VARIABLE SPEED MOTORS

With growing frequency bands, the frequency inverters may, in theory, control a motor 2 or 3 times its rated speed. However, the chosen bearings and balancing class selected for the rotor do not enable

exceeding a maximum mechanical speed without endangering the motor and its life span.

The chart below indicates the maximum speeds supported by the LSMV motors under horizontal and vertical operation.

These speed limit values are given for motors directly connected to the driven machinery (without radial or axial loads).

The relationship enabling to calculate the greasing interval l'g to the frequency is in average:

$$l'g = \frac{25lg}{f}$$

l'g = greasing interval

Maximum mechanical speed for LSMV motors 2, 4 and 6 P

Type	71	80	90	100	112	132	160	160 LU	180	200	225 ST/MT/MR	225 MG	250	280 SC/ML/MD	280 MK	315
Speeds	15000	15000	12000	10000	10000	7500	6000	6000	5600	4500	4300	4000	4000	3400	3200	2700

Any motors required to operate at more than 4000 min⁻¹ are subject to a specific study.

In the case of brake motors, refer to the brake selection chart for speed limits.

For encoder options, high-speed operation can lead to signal saturation.

Asynchronous LSMV motors for speed variation General information

F1 - Quality commitment

LEROY-SOMER's quality management system is based on :

- control of procedures right from the initial sales offering until delivery to the customer, including design, manufacturing start-up and production.

- a total quality policy based on making continuous progress in improving operational procedures, involving all departments in the company in order to give customer satisfaction as regards delivery times, conformity and cost.

- indicators used to monitor procedure performance.

- corrective actions and advancements with tools such as FMECA, QFD, MAVP, MSP/MSQ and Hoshin type improvement workshops on flows, process re-engineering, plus Lean Manufacturing and Lean Office.

- annual surveys, opinion polls and regular visits to customers in order to ascertain and detect their expectations.

Personnel are trained and take part in the analyses and the actions for continuously improving the procedures.

LEROY-SOMER has entrusted the certification of its expertise to various international organisations.

Certification is granted by independent professional auditors, and recognises the high standards of the **company's quality assurance procedures**. All activities resulting in the final version of the machine have therefore received official **ISO 9001: 2000 certification from the DNV**. Similarly, our environmental approach has enabled us to obtain ISO 14001: 2004 certification.

Products for particular applications or those designed to operate in specific environments are also approved or certified by the following organisations: CETIM, LCIE, DNV, INERIS, EFECTIS, UL, BSRIA, TUV, CCC, GOST, which check their technical performance against the various standards or recommendations.

Use the following titles for selection.

The products and materials presented in this catalogue can be subjected to technical, visual and operational evolution or modifications.
Under no circumstances is their description contractual.

Notes

Notes

Notes

I - SCOPE OF APPLICATION

These General Conditions of Sale ("GCS") shall apply to the sale of all products, components, software and services (referred to as "Products") proposed or sold by the Seller to the Client. Said GCS shall also apply to all quotation offers made by the Seller, and are an integral part of all orders. "Seller" is understood to mean all companies directly or indirectly controlled by LEROY-SOMER. As a complementary measure, orders are also subject to the latest version in force of the Inter-Union General Conditions of Sale for France of the F.I.E.E.C. (*Fédération des Industries Electriques, Electroniques et de Communication* [Federation of Electrical, Electronic and Communication Industries]), inasmuch as they are not contrary to the GCS.

The acceptance of the Seller's offers or quotations, or any order, entails the acceptance without reservation of these GCS and rules out all contrary provisions shown on all other documents and, in particular, on the Client's order forms and the Client's General Conditions of Purchase.

If the sale concerns castings, by way of derogation to Paragraph 1 above, said castings shall be subject to the latest version in force of the *Conditions Générales Contractuelles des Fonderies Européennes* [General Contractual Conditions of European Foundries]. **The Products and services sold pursuant to these GCS may under no circumstances be used for applications in the nuclear field, as such sales expressly fall under technical specifications and specific contracts that the Seller reserves the right to refuse.**

II - ORDERS

All orders, even those taken by the Seller's agents and representatives, and regardless of the transmission method, shall only bind the Seller after written acceptance thereby of the order.

The Seller reserves the option of modifying the characteristics of its Products without notice. However, the Client shall retain the possibility of specifying the characteristics on which its commitment is contingent. In the absence of any such express stipulation, the Client may not refuse delivery of new, modified Products.

The Seller may not be held liable for an unsatisfactory selection of Products if said selection results from conditions of use that are incomplete and/or mistaken, or not disclosed to the Seller by the Client. Except in the event of a stipulation to the contrary, the offers and quotations submitted by the Seller shall only be valid for thirty days as from the date on which they are drawn up.

Where the Products must comply with standards, specific regulations and/or be received by control and inspection agencies, the price request must be accompanied by the technical specification, all terms and conditions the Seller must comply with. Reference shall be made thereto on the quotation or offer. Approval and attendance costs shall always be borne by the Client.

III - PRICES

Tariffs are expressed exclusive of tax and may be revised without notice.

Prices are either deemed to be firm for the period of validity specified on the quotation, or subject to a revision formula attached to the offer and which specifies, according to the regulations, parameters pertaining to the materials, products, various services and salaries for which the indices are published in the B.O.C.C.P.F. (*Bulletin Officiel de la Concurrence, de la Consommation et de la Répression des Fraudes* [French Official Journal of Competition and Consumer Matters, and Anti-Fraud Measures]).

All additional costs, in particular approval costs, specific checks, etc., shall be invoiced in addition.

IV - DELIVERY

Sales are governed by the latest edition in force of the INCOTERMS published by the Internal Chamber of Commerce ("I.C.C. INCOTERMS").

The Products shall be dispatched according to the conditions stated on the order acknowledgement issued by the Seller for all orders of Products.

Except in the event of specific provisions, the prices correspond to Products that are made available in the Seller's factories, including basic packaging.

Except in the event of a provision to the contrary, the Products shall always be transported at the risk of the addressee. In all cases, it shall be the responsibility of the Client to make any claims to the carrier, within the delivery time and in the forms specified by law, concerning the state or number of parcels received, and to concomitantly provide the Seller with a copy of such declaration. Failure to comply with said procedure shall exempt the Seller from any liability. In any event, the Seller's liability may not exceed the amount of the indemnities received from its insurers.

If the provisions concerning transportation are amended by the Client subsequent to the acceptance of the order, the Seller reserves the right to invoice any supplemental costs that may result therefrom.

Except in the event of a contractual or statutory obligation to the contrary, packaging shall not be returnable.

In the event that a delivery of Products is delayed for a reason not attributable to the Seller, the Products stored on the Seller's premises shall be insured at the exclusive risk of the Client. Consideration for storage, costs will be invoiced at a rate of 1% (*one per cent*) of the total amount of the order, per week or partial week of storage, with no deductible or *de minimis* amount, as from the date of Products availability provided for in the contract. Upon expiration of a period of thirty days as from said date, the Seller may, at its discretion, either freely dispose of the Products and/or agree with the Client on a new delivery date for said Products, or invoice the Client in full for payment, according to the timeframes and amount provided for contractually. In any event, down payments shall inure to the Seller as indemnities, without prejudice to any other action the Seller may take.

V - DELIVERY TIME

The Seller shall only be bound by the delivery time mentioned on its order acknowledgement. Said delivery time shall only start to run as from the date of issuance of the order acknowledgement by the Seller, and subject to the fulfilment of the conditions provided for on the confirmation receipt, in particular receipt of the down payment for the order, notification of the opening of an operative irrevocable and confirmed documentary credit that complies in all respects to the Seller's request (*in particular regarding the amount, currency, validity and licence*), and the acceptance of the payment conditions accompanied by the implementation of any guarantees requested, etc.

Exceeding delivery time shall not grant the Client entitlement to damages and/or penalties.

Except in the event of a specific condition to the contrary, the Seller reserves the right to make partial deliveries.

Delivery times shall be interrupted by right and without the need for any judicial formalities, by any failure to pay or late payment by the Client.

VI - TESTS - QUALIFICATION

The Products manufactured by the Seller are checked and tested before leaving its factories. Clients may be present at said tests if specified on the order.

Specific tests and/or trials, as well as approval of Products, requested by the Client, whether carried out on the Client's premises or in the Seller's factories, on site, or by control and inspection agencies, must be specified on the order and are always at Client's expense.

Prototypes for Products specially developed or adapted for a Client must be qualified by the Client before serial production in order to ensure that it is compatible with the other components that make up its equipment, and that it is adapted to the intended use. Said qualification will also enable the Client to ensure that the Products comply with the technical specification. In this respect, the Client and Seller shall sign a Product Approval Form in two original, one of which shall be retained by the Client and one by the Seller.

In the event that the Client requires delivery without having firstly qualified the Products, said Products shall be delivered as they stand and shall always be deemed to be prototypes; the Client shall then be solely liable for using the Products or delivering them to its own clients. However, the Seller may also decide not to deliver the Products that have not received the Client's prior approval.

VII - PAYMENT CONDITIONS

All sales shall be deemed to be completed and payable at the Seller's registered office, without any possible derogation, regardless of the payment method, where the contract was concluded and where delivery was made.

Where the Client is located out of French territory, invoices shall be payable in cash upon receipt, or by a bank draft or a bill of exchange, within 30 (thirty) days net.

All early payment compared to the deadline fixed shall give right to a discount of 0.2% (*nought point two per cent*) per month, of the amount concerned of the invoice.

Except in the event of provisions to the contrary, where the Client is located outside of French Territory, invoices shall be payable in cash against remittance of shipping documents, or by irrevocable documentary credit confirmed by a first rate French bank, at Client's expense shall be understood to mean the funds being made available on the Seller's bank account and must imperatively be made in the invoicing currency.

Pursuant to French Law no. 2001-420 of 15 May 2001, failure to pay an invoice when due shall trigger, after service of formal notice that has remained without effect, payment to the Seller of a flat-rate penalty on the due date of the receivable, which shall be applied to amount inclusive of tax of monies owed if the invoice is liable to VAT (*Value Added Tax*), and the suspension of pending orders. Said penalty is equal to the European Central Bank Rate + 7 basis points.

The collection of said monies via litigation shall trigger an increase of 15% (*fifteen per cent*) of the amount claimed, with a minimum of Euros 500 exclusive of tax (*five hundred euros exclusive of tax*), with tax in addition if due.

Moreover, subject to compliance with the statutory provisions in force, in the event of total or partial failure to pay any invoice or instalment whatsoever, regardless of the payment method used, all amounts that remain owed to the Seller (*including its subsidiaries, affiliated or allied companies, whether French or foreign*) for all deliveries and services, regardless of the due date originally provided for, shall immediately become due.

Notwithstanding any specific payment conditions provided for between the parties, the Seller reserves the right to require, in the event of a decline in the Client's credit rating, a payment incident or bankruptcy of the Client :

- the payment in cash, before the Products leave the factory, for all orders currently being fulfilled,
- down payments to be made on all orders,
- alternative or different payment guarantees.

VIII - PAYABLE AND RECEIVABLE BALANCE

Except where prohibited by law, the Seller and the Client expressly agree to balance their payables and receivables arising from their trade relations, even if all conditions defined by law for legal balancing are not met.

For the application of said clause, the Seller shall mean any company of the LEROY-SOMER Group.

IX - TRANSFER OF RISK / RESERVE OF TITLE

Risk shall be transferred as soon as the Products are made available, according to the delivery conditions stipulated on the order acknowledgement.

The transfer to the Client of title shall take place after payment in full. In the event that the restitution of the Products delivered is claimed by the Seller, the Seller is entitled to retain any down payment as compensation.

Remittance of a bill that creates an obligation to pay (*bill of exchange or other*) shall not constitute payment and discharge. For as long as the price has not been paid in full, the Client is required to inform the Seller, within twenty-four hours, of the sequestration, requisition or confiscation of the Products for the benefit of a third party, and to take all protective measures to make known the Seller's property right in the event of action by creditors, and to cause such right to be respected.

X - CONFIDENTIALITY

Each of the parties undertakes to maintain the confidentiality of all technical, trade, financial or other information received from the other party, whether orally, in writing or by any other means of communication, when any order is negotiated and/or fulfilled. This confidentiality obligation shall apply throughout the period during which the order is fulfilled and for 5 (five) years subsequent to completion or cancellation thereof, regardless of the reasons therefor.

XI - INDUSTRIAL AND INTELLECTUAL PROPERTY

Data, studies, results, information or software, whether patentable or not obtained by the Seller when any order is fulfilled shall remain the exclusive property of the Seller.

With the exception of instruction and maintenance manuals, documents of any nature remitted to the Client shall remain the exclusive property of the Seller and must be returned to it upon request, even if the Client was invoiced for part of the cost of the study, and said documents may not be disclosed to third parties or used without the Seller's prior written agreement.

XII - CANCELLATION / TERMINATION

The Seller reserves the right to cancel or terminate immediately, at the Seller's discretion, by right and without the need for any judicial formalities, the contract in the event of failure to pay any portion whatsoever of the price, when due, or in the event of any breach of any of the Client's contractual obligations. Down payments and any amount already paid shall remain in the Seller's hands in the form of indemnities, without prejudice to the Seller's right to claim damages. In the event that the contract is cancelled, the Products must be returned to the Seller immediately, regardless of where the Products are located, at Client's expense and risk, under penalty of 10% (*ten per cent*) of the value thereof, per week's delay.

XIII - WARRANTY

The Seller warrants the Products against all operating defects caused by a material or manufacturing fault, for a period of twelve months as from the date on which the Products are made available, unless a different statutory provision subsequently applies, under the conditions defined below.

The warranty may only be triggered insofar as the Products have been stored, used and maintained in accordance with the Seller's instructions and manuals. The warranty does not apply where the defect results, in particular, from :

- inadequate monitoring, maintenance or storage,
- normal wear and tear on the Products,
- servicing or modification of the Products without the Seller's prior written authorisation,
- the use of the Products or use of the Products for a purpose other than that intended,
- faulty installation of the Products on the premises of the Client and/or the end user,
- failure by the Client to disclose the purpose or conditions of use of the Products,
- failure to use genuine spare parts,
- force majeure or any event that is beyond the control of the Seller.

In any case, the warranty is limited to the replacement or repair of the parts or Products deemed faulty by the Seller's technical departments. If the repair is entrusted to a third party, the repair shall only be carried out once the Seller has agreed to the quotation for the repair.

All Products returns must have been given the Seller's prior, written authorisation.

The Products to be repaired must be dispatched carriage paid, to the address given by the Seller. If the Products are not accepted under warranty, their return to the Client shall be invoiced to the Client or the end user.

This warranty shall apply to the Seller's Products that are made readily available and therefore does not cover the de-installation and re-installation of said Products in the equipment into which it is mounted.

Repair, modification or replacement of any part or Product during the warranty period may not result in the warranty period being extended.

The provisions of this article constitute the Seller's sole obligation concerning the warranty of the Products delivered.

XIV - LIABILITY

The Seller's liability is strictly limited to the obligations stipulated in these GCS and those expressly accepted by the Seller. All penalties and indemnities provided for therein constitute lump sum damages that include discharge for the Seller and are exclusive of any other penalty or indemnification.

With the exception of the Seller's gross negligence and the compensation of bodily injury, the Seller's liability shall be limited, in total, to the contractual amount, exclusive of tax, of the Product(s) that give(s) right to compensation.

The Seller may under no circumstances be required to indemnify consequential, indirect and / or punitive damages that the Client may use as the basis for a claim; as a result, the Seller may not be required to indemnify, in particular, production losses, operating losses or lost profit or, in general, any damage eligible for indemnification other than bodily injury or damage to property.

The Client undertakes to hold harmless the Seller and / or its insurers from any and all claims made by its insurers and/or any third party in a contractual relation with the Client, in excess of the limit and for the exclusions listed above.

XV - SPARE PARTS AND ACCESSORIES

Spare parts and accessories shall be supplied upon request, to the extent of their availability. Associated costs shall be invoiced in addition.

The Seller reserves the right to require a minimum quantity or invoicing amount per order.

XVI - WASTE MANAGEMENT

The Products that form the purpose of the sale does not fall within the scope of the European Directive 2002/96/EC (WEEE) dated January 27th, 2003, and all related legislation of Member States of the European Union that result therefrom, on the composition of electrical and electronic equipment and the disposal of waste from such equipment.

In accordance with Article L 541-2 of the French Environment Code, it is the responsibility of the waste holder to ensure the disposal thereof or to cause the disposal thereof at its own expense.

XVII - FORCE MAJEURE

With the exception of the Client's obligation to pay the monies owed to the Seller in respect of an order, the Client and Seller may not be held liable for the total or partial failure to perform their contractual obligations if such failure results from the occurrence of a force majeure. Delays or disturbances in production that totally or partially result from war (whether declared or not), terrorist act, strikes, riots, accidents, fires, floods, natural disasters, transportation delays, shortage of components or materials, governmental decision or action (including prohibition on import/export or the withdrawal of an import/export licence) shall, in particular, be deemed a force majeure.

If one of the parties is delayed or prevented from performing its obligations by reason of this Article for a period in excess of 180 consecutive days, each party may then terminate, by right and without any need for judicial formalities, the unperformed part of the order, by written notice to the other party, without liability. However, the Client shall be required to pay the price agreed pertaining to the Products already delivered on the date of termination.

XVIII - PROHIBITION ON UNLAWFUL PAYMENTS

The Client shall refrain from being engaged in any activity that would expose the Seller or any of its affiliates to a risk of penalties under laws and regulations of any relevant jurisdiction prohibiting improper payments, including but not limited to bribes or gifts of an obviously unreasonable amount, to any government or agency officials, to political parties or their officials or candidates for public office, or to any employee of any customer or supplier.

XIX - TRADE COMPLIANCE LAWS

The Client agrees that all applicable import, export control and sanctions laws, regulations, orders and requirements, as they may be amended from time to time, including without limitation those of the European Union, the United States of America, and the jurisdictions in which the Seller and the Client are established or from which Products may be supplied, and the requirements of any licences, authorisations, general licences or licence exceptions relating thereto ("Trade Compliance Laws") will apply to its receipt and use of Products, as well as related services and technology. In no event shall the Client use, transfer, release, export or re-export the Products, related services or technology in violation of Trade Compliance Laws.

Seller shall have no obligation to supply any Products, or services unless and until it has received any necessary licences or authorisations or has qualified for general licences or licence exceptions under Trade Compliance Laws.

If for any reason any such licences, authorisations or approvals are denied or revoked, or if there is a change in any Trade Compliance Laws that would prohibit Seller from fulfilling the contract, or would in the reasonable judgement of Seller otherwise expose Seller and/or Seller's Affiliate(s) to a risk of liability under Trade Compliance Laws, Seller shall be relieved without liability of all obligations under the contract.

XX - SEVERABILITY

All clauses and/or provisions of these General Conditions that are deemed or become null or void shall not cause the nullity or voidance of the contract, but solely the clause and/or provision concerned.

XXI - DISPUTES

THIS CONTRACT SHALL BE GOVERNED BY AND INTERPRETED IN ACCORDANCE WITH THE LAWS OF FRANCE.

ANY DISPUTE IN RELATION TO THE INTERPRETATION OR THE EXECUTION OF THIS CONTRACT NOT AMICABLY SETTLED BETWEEN THE PARTIES WITHIN A 30 DAY PERIOD, SHALL BE SETTLED BY THE COMPETENT COURT OF ANGOULÊME (FRANCE), EVEN IN THE CASE OF INTRODUCTION OF THIRD PARTIES OR THE INVOLVEMENT OF SEVERAL DEFENDANTS. HOWEVER, THE SUPPLIER RESERVES THE EXCLUSIVE RIGHT TO BRING THE DISPUTE TO THE COMPETENT COURTS OF THE SELLER OR THE CLIENT.
